

The company

Nanoleedge, innovative resins & films provider, for users of specialty epoxy systems.

Nanoleedge is a leading formulator of nano-based and green-based epoxy resin systems and epoxy resin films. Our NANO IN epoxy resin systems dramatically increases basic material properties by 20-30% resulting in weight savings and our EKKO IN resin systems is an alternative green epoxy technology. Our product portfolio, namely "INNOVIUM", is unique since the resin and film are supplied ready to use. The formulation and nano dispersion is already created for the end user making it clean and safe. Potential Markets for NANO IN and EKKO IN are in sporting goods, wind energy, marine, aerospace, military and industrial applications.

Core Competence

NANOFORMULATION,

Strong expertise in nanotechnology blending, new polymers, processing and green formulation.

Solution

INNOVIUM

INNOVIUM is a complete range of customized resin systems and intermediate resin films, entirely dedicated to the Fabrics Weavers, Prepreg Makers, Composite Part Manufacturers and End Customers .

Applications

Depending on your company profile and your project requirements, Innovium is composed of specific application designed systems named " **INNOVIUM Apps**".

Sporting Goods

Civil Engineering

Oil & Gas

Tooling Prototyping

Wind Energy

Aerospace

Transportation

From Sporting Goods to Aerospace, Nanoleedge shall ensure you to manufacture premium materials based on nanoblending technologies & industrial know how.

Techno corner

NANO IN : nanoblending technology / **EKKO IN** : ecoformulation technology

Nanoist community, taking advantage of nanoparticles and greener additives for improving durability and processability of composite materials. Join now at www.inanoist.com
