Premium materials for Wind Energy Application

AKD 2607

Premium hot-melt resin system

Innovative solution dedicated to green energy

APPLICATION

DURABILITY IMPROVEMENT

- Improve lifespan of blades or wind turbine parts
- Reduce Maintenance Cost
- Limit systems shut-down

BENEFITS

- Structural improvement owing to nanochemicals
- Available as hotmelt semi-solid resin
- Optimal solution to access prepreg process for blades and wind turbine parts manufacturing
- Optimize price/performance ratio

MORE FEATURES

- Ensure excellent damage tolerance such as toughness, compressive strength, impact, fatigue and crack growth resistance
- Also available as semi-solid resin film for an easier way to manufacture composites
- Solvent free resin system for safe handling
